

Second Skool

The complete tuition-centre app — attendance, marks, fees, rankings and parent updates, all in one place. This is the detailed guide to every feature.

Head & Teacher app

Student & Parent app

Installable PWA

Push notifications

WhatsApp built-in

Rupee fee tracking

Detailed Feature Guide

Everything the app does, screen by screen

Version 2025
Updated edition

OVERVIEW

One app, three kinds of people

Second Skool replaces the register book, the marks diary, the fee notebook and the "please send today's homework" WhatsApp scramble. Everyone opens the **same** app — what they see depends on who they are.

Head Teacher

The owner of the centre. Can do **everything** a teacher can, **plus** the management side: staff approvals, fees, branches, batches, subjects, reports and the timetable. Grants access to everyone else.

Teacher

Day-to-day staff. Marks **attendance**, enters **results**, sets **homework**, sends **reminders** and shares study material. Cannot touch money or staff settings.

Student / Parent

Sees only their own child: attendance %, marks, class rank, timetable, homework, fees due and every reminder — read-only, always up to date.

How everyone gets in (join codes)

Nobody types anybody's password. The centre hands out short codes, and the app links accounts automatically.

Centre join code

A teacher signs in, enters this code, and appears in the head's **Staff access → Pending** list. The head taps **Approve** and they're in.

Student code

Shared with families. A student registers themselves; they land in **Student requests**. Their login **only works once the centre approves** — so nobody unknown slips in.

Personal link code

Every student also has their own **TUT-xxxx** code (e.g. for the parent's phone). One tap sends it over WhatsApp from the student's page.

Why codes instead of passwords? It keeps every account tied to a real, approved person at your centre — no shared logins, no strangers, and no password resets to manage. The head can regenerate the student code any time; the old one stops working instantly.

Sign-in & install

- ✓ **Google sign-in** — one tap, nothing to remember.
- ✓ **Email & password** — a fallback for the installed app or shared phones; the head can set a password for phone login from their profile.
- ✓ **Install to home screen** — it's a PWA, so it installs like a real app (icon, full screen, offline shell) without any app store.

Home & Timetable

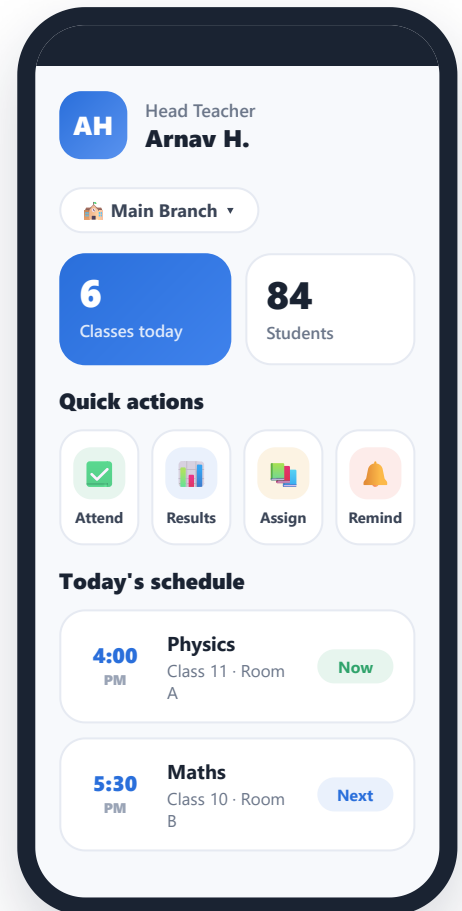

The Home screen

The landing screen after sign-in. Built to answer "what's happening today?" in one glance and start the four most common jobs in one tap.

- ✓ **Greeting & role** — your name with a "Head Teacher" or "Teacher" label.
- ✓ **Branch selector** — the head can switch which branch they're looking at; teachers see their branch fixed.
- ✓ **Two live counters** — **Classes today** (from the timetable) and total **Students**.
- ✓ **Quick actions** — Attendance , Results , Assignment , Reminder .
- ✓ **Today's schedule** — every class with time, subject, class, room and a status chip.

Everything else lives in "More". Home stays clean — fees, rankings, meetings, branches, subjects, batches, reports and staff are one tap away under the More tab.

Timetable — the weekly grid

A Monday-to-Saturday grid that drives the whole app — the "Classes today" count and each student's timetable both read from here.

- 1 The **head** taps a day, then **Add period**.
- 2 Enters **start & end time, subject, class** and **room**.
- 3 Saves — it appears for teachers and every student in that class instantly.
- 4 Tap any period to **edit** or **delete** it.

Period colour-coding

-  **Blue** — a normal class
-  **Amber** — a special session (Test, Meeting, Doubt-solving)
-  **Grey** — a free period

Teachers can view but not edit. Only the head shapes the timetable, so it stays consistent for everyone.

Attendance & Results

Attendance — done in under a minute

- 1 Open **Attendance** and pick the **class tab** at the top.
- 2 The full roster loads with everyone marked **Present** by default.
- 3 **Tap a name to toggle** them to Absent — running Present / Absent counts update live.
- 4 Tap **Save**. It's stored against today's date for the whole class at once.

- ✓ Each student's **attendance %** updates automatically from this.
- ✓ Parents see it on the student app the moment you save.
- ✓ Later reminders can target "**absentees**" using this data.

Where the % shows up

One save feeds four places:

- The **student list** badge (per student)
- The student's **Attendance ring**
- The **weekly / monthly report** per branch
- The "**send to absentees**" reminder filter

Results — marks that rank themselves

Enter a test once and the app grades it, ranks the class and notifies every parent — no spreadsheets.

- 1 Choose **class**, **subject**, type a **test name** and the **max marks**.
- 2 Enter each student's **score** down the roster.
- 3 Tap save — the app records the test and every result.
- 4 A "**New results published**" alert is pushed to that class automatically.

What happens on save

- ✓ Percentages & **letter grades** calculated for each student.
- ✓ **Class rankings** for that subject rebuild instantly.
- ✓ Students see the result, grade and a progress bar.
- ✓ It counts toward each student's **monthly average**.

The whole chain is automatic. Marks in → grades, ranks, parent alerts, monthly averages and the leaderboard all out. You type numbers once; the app does the rest.

Homework & Reminders

Assignments (Homework)

Post homework once and it lands in every student's Homework tab with the due date attached.

- 1 Enter a **title**, pick the **subject** and **class**.
- 2 Set a **due date** and type any **instructions**.
- 3 Save — it joins the "active assignments" list and appears for students.

Students tap any assignment to expand the full instructions, and see "due ..." right on the card.

On the student side

The Homework tab lists every open assignment newest-first. A tap opens the instructions. It's read-only — a clear to-do list, not a submission box.

Reminders — the message engine

The single most-used feature. Pick a type, write a line, choose who gets it, and it's pushed to the right families instantly. Five reminder types:

Notice

General announcements — a holiday, a schedule change, an event.

Fees

Payment nudges. Pairs with the "fees due" audience filter.

Homework

A quick "don't forget tonight's homework" prompt.

Test

Upcoming-test alerts so students revise in time.

Absence

Follow-ups to students who missed class.

Audience filter

All, only **absentees**, or only **fees-due** — built from live data.

- 1 Pick a **type** (Notice, Fees, Homework, Test, Absence).
- 2 Write the **message**.
- 3 Choose the **audience** — everyone, just absentees, or just those with fees due.
- 4 Send — it's pushed as a notification and shows in each student's Reminders & Notifications.

Smart targeting saves you the list-building. Choosing "absentees" or "fees-due" means you never manually check who owes money or who missed class — the app already knows and messages exactly them.

Students & Staff

Students — the people directory

A searchable list where every card shows the avatar, name, class, attendance % and a fee badge (Paid / Due / Overdue) at a glance.

Adding a student (head)

- 1 Enter **name, school, standard** (Class 1–12), **batch, branch, parent contact, address**.
- 2 Set the **fee amount (₹)** and a **due date**.
- 3 Save — the app **auto-generates a login code** and shows a success screen.
- 4 Send the code on **WhatsApp** or copy it, right there.

Editing a student

- ✓ See & **copy the link code**, or WhatsApp it in green.
- ✓ Edit any detail; phone numbers are **validated**.
- ✓ Flip fee status: **Paid / Due / Overdue**.
- ✓ Assign a **batch** and **branch**.

Students can't edit themselves. Their profile is read-only — only the head changes records, so data stays trustworthy.

Staff access (head only)

Control who works at your centre. New teachers appear here the moment they register — the screen live-refreshes, no reload needed.

- 1 Share the **centre join code** (one tap to copy).
- 2 A teacher registers and lands in **Pending approval**.
- 3 Tap **Approve** (they can now work) or **Reject**.
- 4 For trusted staff, tap **Make head teacher** to grant full access — or **Remove** anyone.

Two levels of trust

Teacher — marks attendance, enters marks, sets homework. Cannot see money or settings.

Head — full control: fees, staff, branches, reports. Grant it only to people you fully trust. A teacher can **request** head access; you approve.

Student requests — self sign-up, safely gated

Students who used the student code appear here. You review their details, and their login **only activates after you approve**.

- 1 Review name, class, school, parent and address on the request card.
- 2 Tap **Approve** and set their **class, branch, batch** and an optional **first fee + due date** in one step.
- 3 Confirm — the code goes live and the student is in. Or tap **Decline**.

Fees & Reports

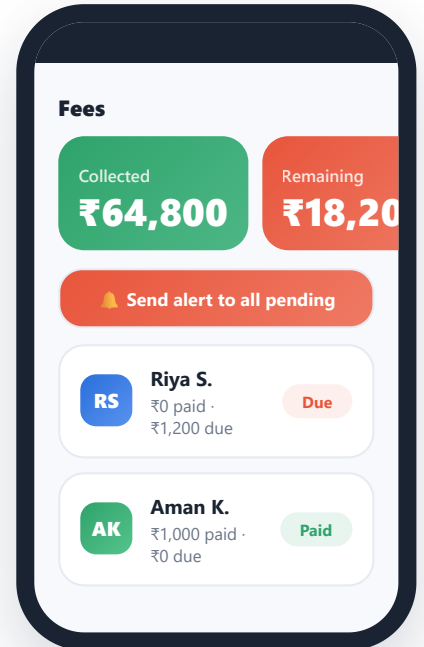

Fees — money at a glance

Updated

The fee screen now opens with two big totals so you know exactly where your centre stands this cycle — no adding up in your head.

- ✓ **Collected** (green) and **Remaining** (red) totals across all students, in ₹.
- ✓ Each row shows that student's **own collected & due amounts**.
- ✓ Rows are sorted **pending-first** so who-owes-what is on top.
- ✓ Tap a row's badge to **toggle Paid / Due** instantly.
- ✓ **"Send alert to all pending"** messages every unpaid family at once.
- ✓ An **add-fee form** records a new charge against a student.

Weekly & Monthly Report

A one-tap health check of the whole centre, switchable between the last **7 days** and **30 days**, across three tabs:

Branches

Per branch: students (and new joiners), staff, attendance %, fees collected & pending. Tests run this period at the bottom.

Students

Each child's attendance %, test count and average, plus fee status — with a **Send to parent** WhatsApp button per student.

Teachers

What each staff member logged: attendance marks, results entered, assignments created — so you see who's active.

Built to be shared. The whole report drops into WhatsApp with one tap — send it to yourself or a co-owner, or send each parent their child's progress individually.

Organising your centre

The rest of the management menu — the tools that keep a growing centre tidy as you add branches, batches and subjects.

Rankings

Auto-generated leaderboards per subject. Switch subject tabs to see students ranked by average; the top three are highlighted in amber. Nothing to maintain — it's built straight from the marks you enter.

Meetings

Schedule staff meetings or parent-teacher sessions with a **title, type, date and time**. Keeps everyone on the same page about what's coming up.

Branches

Run **multiple locations** from one account. Add a branch (name, address, mark the main one); each shows a **live student count**. Tap to expand its roster. Students, reports and the home screen all filter by branch.

Batches

Updated

Group students into **batches** (e.g. "Morning JEE", "Evening Class 10"). Each shows a live count and an expandable roster. Removing a batch is safe — **students keep all their records**, only the label goes.

Subjects

Define the subjects your centre teaches. Add inline in seconds. These feed the timetable, results and rankings. Removing one warns you that its tests, results and timetable slots go with it.

Study material

Share notes and files with students. New material shows a **badge** on the student's "Material" tile so they never miss an upload.

Your profile & settings

Everyone can

- ✓ Edit their **name and phone**.
- ✓ Turn on **push notifications** for this device.
- ✓ Set a **password** for phone login.
- ✓ **Sign out**.

The head can also

- ✓ Edit the **centre name**.
- ✓ Upload a **centre logo** (students see it on their home screen).
- ✓ Manage the **student join code** (regenerate any time).

What the family sees

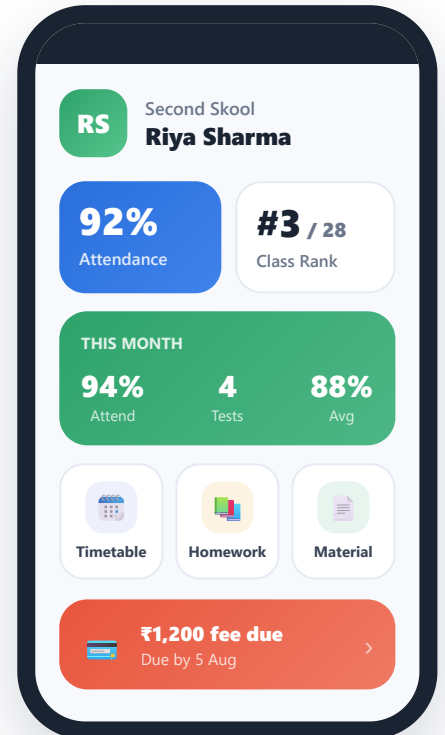

After linking with the student code, the child (or parent) gets a calm, read-only view of exactly one student. No clutter, no editing — just clear, live progress.

Student home

- ✓ **Attendance %** and **class rank** front and centre.
- ✓ A **"This month"** card — attendance, tests taken, average score.
- ✓ Tiles for **Timetable**, **Homework** and **Material** (with a new-uploads badge).
- ✓ A red **fee-due banner** when a payment is pending.
- ✓ **Reminders** and **recent results** feeds.
- ✓ A bell icon for the full **notifications** history.

Push alerts, not nagging. New results, reminders and fee notices arrive as phone notifications — turned on with one "Alerts" tap.

Results

Every test with grade, marks and a progress bar, plus an overall grade & average.

Ranking

A podium for the top 3 and a full leaderboard per subject — the student's own row highlighted.

Attendance

A big % ring plus a day-by-day log of present, absent and leave.

Teachers

The faculty list with each teacher's subject, experience, qualification and rating.

Fees

Amount due, due date and a full payment history of what's been paid.

Profile

Their own details — read-only, managed by the centre. A lock icon makes that clear.

What's new & why it's built to last

The latest updates

Update	What it means for you
Collected vs Remaining	The fee screen now leads with two totals and shows each student's own paid/due amounts — instant clarity on centre cash flow.
Batches	Group students into named batches with live counts and rosters. Deleting a batch keeps every student record — only the label is removed.
Head-managed batches & rosters	Tap any branch or batch to expand its full student roster in place.
Notice reminder type	A dedicated type for general announcements, added to Fees, Homework, Test and Absence.
Class 1–12 support	The Add-Student standard dropdown now covers the full Class 1 to Class 12 range.
Teacher activity report	See exactly what each staff member logged — attendance, results and assignments — over 7 or 30 days.

Under the hood (in plain English)

Installable app (PWA)

Installs to the home screen like a native app — its own icon, full-screen, works offline for the shell. No app store, no download wait.

Real push notifications

Results, reminders and fee alerts arrive as proper phone notifications, even when the app is closed.

Private & separated by centre

Each centre's data is walled off from every other. Teachers see teaching tools; students see only their own record. Approval gates keep strangers out.

WhatsApp everywhere it helps

Login codes, fee reminders, weekly reports and per-child progress all hand off to WhatsApp in one tap — meeting families where they already are.

The one-line summary: Second Skool turns the register book, marks diary, fee notebook and parent-update group into one live app — where you enter something once and it instantly reaches everyone who needs it, correctly and automatically.

Second Skool
