

Second Skool

A practical guide for Teachers and Head Teachers

What it does, how it helps every day, and why your centre should use it

THE PROBLEM

Running a tuition centre eats your teaching time

Most coaching centres run on a paper register, one overloaded WhatsApp group, and memory. The result is the same everywhere:

Parents keep calling	“Was my child present today?” “When is the test?” “What was his score?” — every call interrupts a class.
WhatsApp chaos	Homework, fees, timetables and results all mixed in one group. Important messages sink within an hour.
Registers get lost	Attendance and marks live in notebooks. One lost register is a month of records gone.
Fees slip through	Nobody remembers who has paid and who hasn’t until the month is over.
No picture of the centre	The owner can’t see attendance trends, fee gaps or teacher workload without asking everyone.

Second Skool replaces the register, the group chaos and the guesswork with one small app that works on the phone you already have. No computer, no training, no per-student accounts.

“Set it up in one evening. Run the whole centre from your pocket.”

See everything. Control everything.

You created the centre, so you hold the keys. Teachers join with a 6-letter code and can do nothing until you approve them. Fees, reports and staff control stay with you alone.

Approve who gets in

A teacher requesting access pings your phone. Approve or reject in one tap. Remove anyone instantly.

Fees, head-only

Track every student's monthly fee — paid, due, overdue. Teachers can never see money matters.

Weekly & monthly reports

Per-branch students, attendance %, fees collected vs pending, tests conducted — and one tap sends it all to WhatsApp.

Teacher accountability

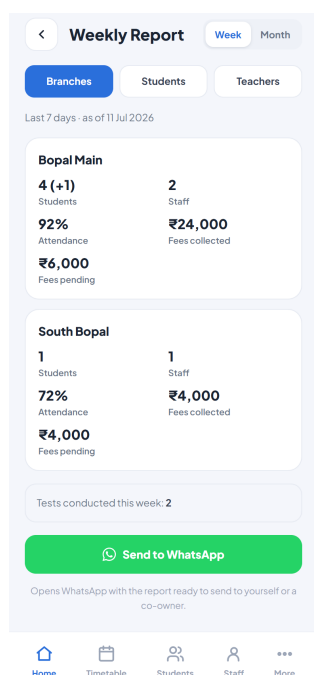

See who marked attendance, entered results and gave homework, per teacher, per week.

Set the timetable once

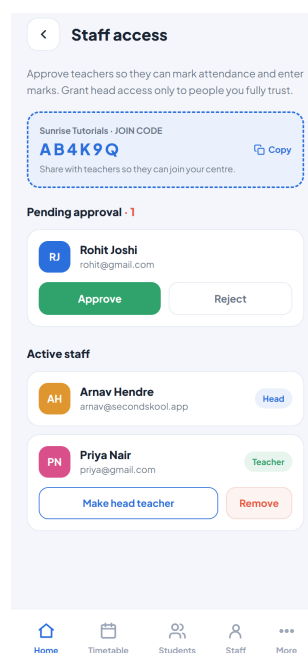

A fixed Mon–Sat schedule that repeats all year. Only you can edit it; everyone sees it.

Multiple branches

Each branch tracked separately — students, staff and fees — with per-branch reporting.

The weekly report — attendance, fees, growth per branch, sent to WhatsApp in one tap.

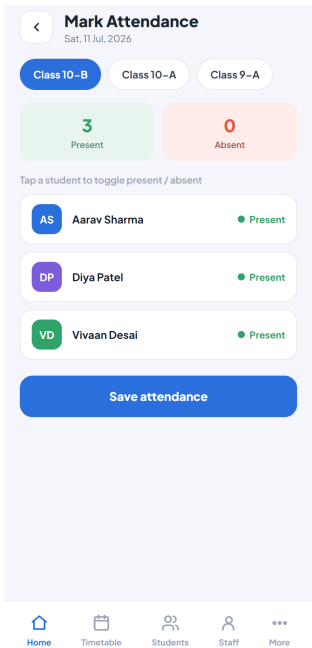

Staff access — approve, promote or remove teachers; share the join code.

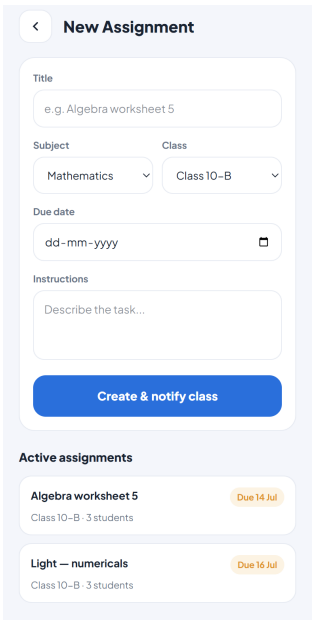

Your whole teaching day, minus the paperwork

Everything a teacher does daily takes under a minute in the app — and every action automatically informs the students it concerns. You never have to say “please check the group” again.

Attendance in 30 seconds	Open the class, tap the absentees, save. Absent students’ parents are notified on their phones instantly.
Results without registers	Enter marks in one list; publishing notifies the class and updates rankings automatically.
Homework that reaches home	Create an assignment with a due date — every student in that class gets it on their lock screen.
Notes without printing	Share typed notes free, attach a PDF or photo, or paste a YouTube/Drive link. Students get a “new material” badge.
Reminders with real reach	Test tomorrow? Fee due? Send to all students, one class, absentees only or fees-due only.

Mark attendance — tap absentees, save; parents know immediately.

Homework — create once, the class is notified automatically.

What actually changes, hour by hour

4:00 PM

Batch arrives. Teacher marks attendance in 30 seconds. Two absentees — both parents already notified. No calls needed.

4:05 PM

Student asks “what’s the schedule?” — nobody asks, actually. It’s on their phone, the same fixed weekly timetable all year.

5:30 PM

Unit test copies checked. Teacher enters marks in one list and hits publish. Every parent sees the score tonight; rankings update themselves.

6:15 PM

Chapter notes shared as a PDF — no photocopies, no printing cost. Students see a red “new material” badge.

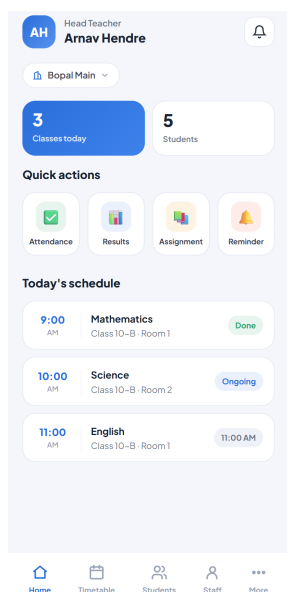

7:00 PM

Teacher assigns homework for Thursday. The whole class gets it on their lock screens before they reach home.

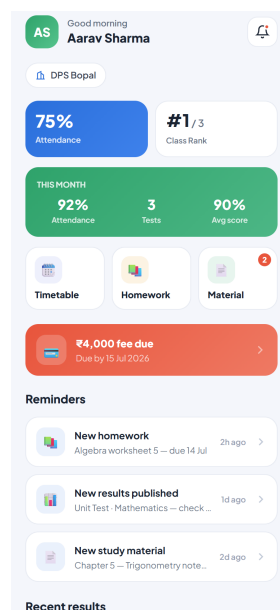

9:00 PM

Head teacher opens Reports: attendance 92%, Rs 6,000 fees pending, 2 tests this week. One tap — the summary is on WhatsApp.

Total extra time spent by staff: under five minutes for the whole day. Total parent phone calls answered: close to zero.

The teacher’s day at a glance — today’s classes, quick actions.

What the parent sees — attendance, rank, fees, homework, alerts.

WHY IT WINS TRUST

Parents see the value of your centre every day

A parent who can see attendance, marks, rank and homework on their own phone stops wondering what their fees pay for. The app quietly markets your centre every single day.

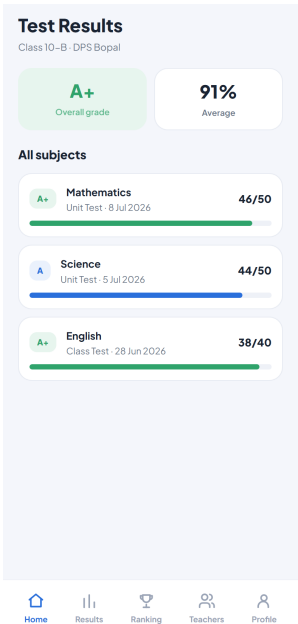

No app store, no accounts It runs in the phone browser and installs to the home screen like a real app. Students enter one code, once.

Notifications that feel official Homework, results, absence and fee alerts arrive like SMS from a school — professional, timestamped, automatic.

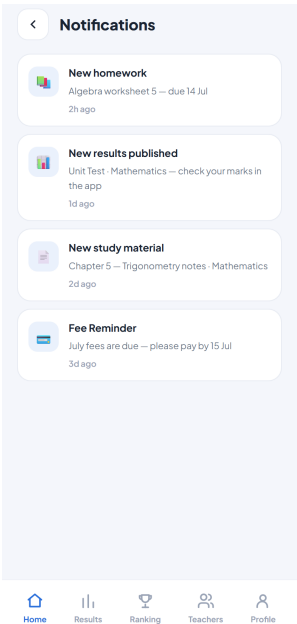

Their child, only their child A student code opens exactly one student's data. No parent ever sees another child's marks or fees.

Data that never leaks Every centre's data is sealed at the database level. Staff must be approved by the head; fees are visible to the head alone.

Nothing to lose No lost registers, no deleted chats. Attendance, marks and payment history live safely in the cloud.

Marks and grades, per subject — visible at home the day you publish.

Every homework, result and reminder in one official feed.

Live in one evening — here's the whole setup

1 • Create your centre	Open the app, sign in with Google, choose “Create centre”. You are now the Head Teacher.
2 • Add the basics	Add your branches, subjects, and the weekly timetable — once. It repeats forever.
3 • Invite teachers	Share your 6-letter join code. Approve each teacher from the Staff Access screen.
4 • Add students	Enter each student's details; the app generates their personal access code automatically.
5 • Hand out codes	Give each student/parent their code. They open the site, enter it once, and add the app to their home screen.
6 • Enable alerts	Students tap “Enable notifications” — from then on, everything you do reaches them automatically.

What it needs

Any Android or iPhone with a browser. No computer, no printer, no technical knowledge. Staff need a Google account; students need nothing but their code.
